# WELCOME TO FUTUREHOME

We are pleased to welcome you to the green shift as a member of the StrømKontroll user community. By joining us, you have taken the first step towards effectively managing your household's energy consumption. Now that your electrician has successfully installed and configured your devices, we are ready to show you how to maximise your savings while making a positive impact on the environment.

# FUTUREHOME APP

The Futurehome app allows you to control your whole household from one place.

## GET STARTED

- 1** Check your email.  
Once your electrician has set up the devices, the household ownership will be transferred to you via email. If you have not received it, please ask your electrician to send it to you.
- 2** Activate your account and download the app using the links in the email.
- 3** Open the app and log in.
- 4** You can add new users as needed.  
To add a new member to your household, go to settings and tap on "+others" → enter the email address of the new user → an email with instructions will be sent to the new user.

## APP NAVIGATION

To navigate through the app, you can use the bottom bar or swipe sideways.

### **Dashboard**

The overall state of your home. To get more information, click on each tile.

### **Areas**

The room overview from where you can control each room separately.

### **Modes**

Allows you to quickly select one of the modes: Home, Sleep, Away or Vacation.

### **Timeline**

Presents all the events happening in your home in chronological order.

### **Settings**

Allows you to edit information, manage devices and explore advanced options.

# POWER MANAGER

Futurehome service created to optimise energy consumption.

## ACCESS POWER MANAGER IN THE APP

- 1 Tap on the energy tile on the dashboard.
- 2 Tap on the energy icon in the upper right corner.
- 3 The Power Manager tab will open. From there, you can select which devices you wish to optimise.

## BENEFITS OF POWER MANAGER

### Save money on energy bills

Find out how much you can save - to use the calculator scan the QR code below.

Calculator

### Help the environment

Reduce your carbon footprint by managing your energy consumption more efficiently.

### Optimise for electricity prices

Optimise the consumption between devices. Operate energy-consuming devices during hours when electricity is cheaper.

### Avoid exceeding your energy threshold

Distribute the energy loads and optimise your grid rent costs by avoiding energy peaks.

## HOW POWER MANAGER WORKS

Power Manager helps you save energy and money by optimising thermostats, water heaters and car chargers.

### **Optimisation based on consumption**

If the expected energy consumption threshold is likely to be exceeded in the current hour, Power Manager will turn off the controlled devices one by one for 10 minutes each.

### **Optimisation based on spot price**

Power Manager chooses the 12 cheapest hours to handle large energy loads such as water heaters and car chargers.

## UNDERSTANDING NOTIFICATIONS

### **Approaching the consumption limit**

You will be notified when you are approaching the consumption limit in a given hour. In such a case, you can manually turn off some devices.

### **Consumption limit exceeded**

You will get this notification if the consumption limit in a given hour is exceeded.

## SAVE EVEN MORE WITH THERMOSTATS

To ensure your comfort, Power Manager optimises the thermostats based only on consumption. It does not optimise them for the spot price, as it does with water heaters and car chargers.

Therefore, in order to save more energy on heating up the house, we recommend using modes and automations.

To create those, go to the settings and select either "modes & shortcuts" or "automation."

### **Modes**

Our app allows you to adjust the temperature that will be set when a given mode is turned on. You can, for example, lower the temperature in Sleep mode to save on heating while you sleep.

### **Automations**

You can use automations to start heating your home earlier in the morning while the energy prices are lower. This way you avoid high peak prices and the temperature will remain until you leave for work.

# EXPLORING THE POSSIBILITIES

Futurehome offers much more!  
Find out what else you can do.

## Device control

Manage the devices in your home including lights, heating, charging, and appliances. The app allows you to control the devices from wherever you are.

## Automations

Set up automations to perform the actions without your active contribution i.e. automatically turn on the lights based on your preferences.

## Energy consumption overview

By tapping on the energy tile on the dashboard you get access to information about your overall energy consumption and its distribution among different devices.
